Script Editor - Simple Script Editor Builder is a simple script editor for Mac OS X and Windows users. It aims to help the user manage complex text files and other files from the graphical interface. How it works The script editor - Simple Script Editor Builder supports text files, log files, images, videos and other files, as well as plain text. You can see them inside a window that can be resized, moved, displayed or hidden when you want. The file is opened, a list of lines is shown and only a line is selected at a time. You can edit the file, make changes directly, and save them. The interface is simple and intuitive, and you can use it for creating, modifying and testing scripts or programs of any kind. The editor does not support the plugins available in other script editors, so you cannot expect to find items such as a debugger, syntax highlighting or other capabilities, though you can install third-party
