Modules for Autodesk Livelink For a period in the 2000s, Autodesk (at the time of creating Livelink) partnered with another company and provided a service that could be used for any product, though mainly aimed at 3D programs such as AutoCAD. Livelink is a business-to-business collaboration platform that works by using an application programming interface (API) similar to Microsoft Office Communications Server. Livelink modules are described as: a directory of available Autodesk products to search for new components a data migration tool for moving data from one Autodesk product to another an integration tool for connecting between Autodesk products a data management tool for adding and updating data History Formative years AutoCAD's history begins in 1979 with developer Mike Weikus and programmer Russ Winger, who created the first version of AutoCAD by reverse engineering existing programs, originally at the University of Wisconsin-Milwaukee. In the 1980s, Mr. Weikus, then working at a consulting firm, met Don Clark, a physicist at the Central Research Institute of the University of Wisconsin-Madison. This contact led to Mr. Weikus's hiring as a developer for the Central Research Institute, which eventually led to him joining the Autodesk team. Mr. Weikus and Don Clark were the first two of three Autodesk founders to have ties to the University of Wisconsin-Madison. AutoCAD 1 In 1981, AutoCAD was released for MS-DOS, and with it, the birth of the industry standard for drafting. The first two products were AutoCAD and AutoCAD Add-In. They were the first dedicated CAD programs. In 1983, AutoCAD 2 was released for MS-DOS, with a rewritten interface and a modern look and feel. In 1986, AutoCAD 3 for MS-DOS was released, with a new geometry engine, a new object-oriented user interface (OBJ), and the first major revamp of the application's look and feel. AutoCAD 3.5 AutoCAD 3.5 was released for MS-DOS, and introduced object-oriented and object-based objects, object groups, styles, dimension styles, annotations, parameters, blocks, and LISP programming. Modify your screen layout in an intuitive and easy-to-use workspace: Save additional time with the new Workspace component of the UI. Eliminate tab clutter by hiding the default view of the drawing, an example of which can be seen on the left side of this video. (video: 4:06 min.) Note: With this release, you can resize the drawing window and the workspace at the same time. Properties: Changes to the way you see changes to properties. Now, you can visualize the changes to attributes and perimeters on the same Properties tab. (video: 1:21 min.) Note: In AutoCAD 2020 for Windows, you can see changes made to attributes and perimeters from the Properties tab as you draw. Draw great looking technical drawings with the new Technical Mesh feature: Attach polylines to mesh faces for improved technical drawings that look awesome. Technical meshes are highly precise, so you'll rarely need to use a tool. (video: 2:04 min.) Note: It is recommended that you use either a technical table or a table to house data, as you would if you were creating a technical drawing. Mouse cursor improvements: Automatic cursor detection. Autohover is now fully automatic. If you've ever watched AutoCAD users move, the new cursor looks the same. Note: AutoCAD has always been an amazing program that makes it very easy to draw, but you can also do amazing things with it if you know how to use the tools.
