"It's just the most flexible software of its kind ever created." — Ken Silver, Autodesk AutoCAD Technical Manager AutoCAD is part of Autodesk's "3D" family of software, which also includes Autodesk Maya and Autodesk 3ds Max. Autodesk 3ds Max is one of the most popular 3D modeling and animation applications in use today. The "3D" suite of applications was originally introduced in 2000. The application first shipped as a product called 3ds Max Viewer, which was included in the 3ds Max CD-ROM for the PC. 3ds Max Viewer was a simple rendering program that used images and 3D geometry to generate a render of the scene being viewed. The render could be viewed on the computer's screen and printed on paper, or printed on film to create an animation. In 2001, 3ds Max was renamed Autodesk 3ds Max for the first time, and the product line was renamed Autodesk 3D for the first time. Autodesk 3D continued to be supported on Windows, Mac, and Linux platforms, and was packaged with Autodesk Media and Entertainment's DFX stereoscopic cinema format player. In 2004, Autodesk 3D became the flagship product of the Autodesk Media and Entertainment division, and was marketed as a standalone Windows, Mac, and Linux multimedia authoring software package with tools for 3D modeling, animation, audio, graphics, and film. In January 2010, Autodesk 3D was replaced by Autodesk 3ds Max, a full-featured 3D modeling, rendering, and animation application, and the standalone 3D product line was discontinued. AutoCAD is the industry's most popular desktop 2D- and 3D-design application. It was originally written in Turbo Pascal and later ported to other programming languages such as Visual Basic, C, and Java. The original AutoCAD was released for Windows-only. A version for DOS (Digital Research Inc., 1984) was later produced. A few years later, the AutoCAD VPL program for Windows 3.0 was released (in 1989). AutoCAD was ported to other platforms (Mac, DOS, OS/2, Unix, and Microsoft Windows) to follow market demand. In 1994, AutoCAD LT for Windows 3.0 (with an optional \$99 perpetual license) was released, which offered users the ability to create 2

I am writing a Java web service with log4j. I would like to distinguish between new incoming messages. Is there a way to do this? A: I'd suggest that you log a new message with the current time and use the logName property on the Sif4j Logger to differentiate the logs by the time. You could also use an ID on the message that would be logged to differentiate the messages. Q: Why does my UIViewController have this prototype property but does not have this method?
