## **What's new in Builders Of Egypt:**

**was originally released back in March 2010 but was recently given an OASIS 2.0 update. The latest version brings many new features, but it also comes with a number of new bugs (not necessarily game-breaking bugs) that players need to keep an eye on. As mentioned before, one of the big issues with Amnesia 2.0 is the “double freeze” bug, but there are also new bugs in the form of controller, mouse, and keyboard problems. A controller bug occurs when a player is using a controller (e.g. PlayStation 4 Controller or DualShock 4 Controller) and the player gets a black screen for a random amount of time. The mouse and keyboard bug can also occur if a player isn’t using a controller (any controller), then when they are trying to run the game, they don’t see anything appear, but they hear “paused” sound effects, and when they enter the pause menu, they see that the game is paused. As a fix for these bugs, we’ve released a hotfix to fix these issues, but if you are experiencing a controller, mouse, or keyboard bug, we do not recommend downloading the latest version. Get Full List of Bug Fixes We have a full list of fixes available on our bug fixing page with all of the fixes and fixes available in the latest version and older versions of Amnesia: Memories. Some of these fixes might be in different versions due to some bug fixes could have made their way in the last update. Now let’s move onto the new bugs and any fixes we’ve discovered and fixed! Mouse and Keyboard Bug In Amnesia: Memories, players need to use a mouse or keyboard to interact with objects on the screen, but this can be a problem with the latest**

**version due to the mouse and keyboard bug that occurs in this version of Amnesia: Memories. When this issue occurs, a player must either use a controller to play the game or not play the game at all. The “mouse and keyboard” bug can be fixed without a workaround by using a keyboard and not using a mouse while playing the game. Using a keyboard on any controller can also fix the controller bug. So overall, a controller bug occurs, but it can be fixed by using a keyboard and not a mouse. In our opinion, a hotfix to fix the “mouse and keyboard” bug is available, so if you experience this**
