This invention relates to a device for grinding the lathe and/or the tailstock of a lathe stand and, more particularly, to a grinding attachment which is easy to install and is cost-effective. Lathe stands are used for various machining operations including material reduction, deburring, grinding and finish grinding. Machining operations such as drilling, boring, countersinking and threading are not typically performed on lathe stands. A lathe stand may comprise a main support assembly that includes the drive shaft of a motor which rotates a main spindle. The main support assembly is typically supported by a tailstock and collet and an induction drive assembly or the like. For example, the induction drive assembly typically includes an induction motor which rotates a chuck which holds a workpiece that is moved by the spindle. Lathe stands are typically equipped with a variety of grinding attachments which perform different types of grinding operations such as cutting, cylindrical grinding, face grinding, honing, brushing and/or deburring. The grinding attachments or grinders and the grinding tool, which is mounted to the spindle may be provided on a grinding attachment. Lathe stands or lathe stands in general are expensive pieces of equipment. Lathe stands can cost between a few thousand dollars and several hundred thousand dollars. Such high capital costs make it desirable to simplify the manufacturing of lathe stands to make the units easier to manufacture, reduce the cost of manufacturing and to make the unit more reliable. The grinding attachment is one component of a lathe stand that is made to exacting standards. Lathe stands and their grinding attachments are generally available in different sizes and configurations so that the units may be adapted to work with different types of lathe spindles and different type of workpieces. The grinding attachments should be easy to install and to change. The grinding attachment should be reliable, easy to maintain, and perform all types of grinding operations. Manchester United/Getty Images Manchester United will not hesitate to cash in on Paul Pogba should the world-record price of £89.5 million move to Juventus be agreed. Blues fans are still reeling from what happened at the end of last month when Pogba left to play for the Italian giants on a five-year contract worth £1 million per week. The 23-
