In the settings you can adjust the illumination mode, the controller's sensitivity, show the UI, or change the Menu audio-volume. What is great with aerofly is that you can launch the software directly from the Start Menu on Windows XP. For experienced pilots there is the possibility to configure the game in just about any way imaginable. Moreover, it is possible to download and extend the complete aerofly model library. If you are a serious modeler, aerofly is the ultimate flight simulation program that is built for you. Aerofly one is an update of the aerofly deluxe version. it contains additional new features: a custom registration code for the aerofly deluxe program that helps to restrict illegal use, a "hot swap" function, a new autopilot and more. One of the major highlights is the new flight physics. The quadratic, included in aerofly, has been replaced by a new physics called Polynomial Twist. This allows for more precise and realistic control during flight. Take care of the features and the texture resolution increases from over 70,000,000 to over 83,000,000. Also the airports have been extended. Recently they received a complete overhaul. In addition to functional changes, the airports were also recreated in outstanding detail. Aerofly Plus now includes over 150.000 square meters of real world scenery. The 4D perspectives go up to world record altitude of 200 kilometers (approximately 124 miles). I had some fun flying my model out over the Alps. Find yourself more opportunities to improve your skills in aerofly. You get advanced training or you can explore the entire library, all included in aerofly one. Aerofly expands your aerobatics area, boosts your performance and increases the realism. Now flying again is fun and exciting! For now, aerofly is great!
