The Spot Healing option is a great tool for correcting minor image imperfections. You can save the image as a poster or as a print, or you can save a copy of it to the clipboard to paste into other images easily (great for retouching photos and artwork before you print). When you're done, the Styles panel lets you apply any of the effects you've created to the entire image. You can use this panel to create special effects that make artwork look more polished, like adding highlights or shadows and creating a graduated or pin-sharp look. Adjustments let you use individual and group layers to add effects that affect parts of your image. You can even change the opacity of a layer for a more mat filter effect. The selection tool enables you to better edit your layers. Blending and Filters - You can try blending selected areas, creating layers, and use spot or spot healing brush to heal spots. Create new layers and add effects to pixels. Filters - You can add your own filters to your graphics or personalize prebuilt ones. Artboards - Art boards contain all the layers of your graphic together and are very useful for batch editing. Adjustment layers - Adjust the tone or color of an image, change the appearance of washed out colors, or create a light or dark tint. Gradient - Gradients are used to create a soft transition from one color to the other. Fill - Fill, apply, or hide existing colors with this tool. Spots - Applies creative filters to selected areas.
