Hi everyone! Just want to share my thoughts on the new version of Photoshop. I have been working with Photoshop for more than 6 years now and there are many things I do differently to now with my latest App. With the new version, there is a section for "editing", there is also a search in which you can find all sorts of things like layers etc. The interface looks really well and the pictures look awesome. As for these two features, this will really enhance the content creator and the photographer. It is possible that the actual software (the full professional version) was not developed for only one single purpose (like document management), but it is especially good for the photographer to be able to search for other stuff in the images and for the content creators to make changes right on the editor website and manage the files. The fact that the app is also part of the Creative Cloud is also wonderful because now, the apps are integrated: you can add your images to the cloud via the camera of you're MacBook Pro and then later edit them from there. You can also create your own cloud or share your work with other people and groups. For those of you that enjoy capturing images or videos, it's now easier to synchronize and share your favorites. Now you can use QuickTime Pro X Server to connect your Mac and edit or play back an iCloud or Photo Stream-synced video, or root-synced SD card, with your Mac using any Apple device like an iPad or iPhone. Simply discover a Network drive on your Mac and you are ready to edit, play, or export a video directly to your device. Then you can switch devices back and forth while your video plays. Once you are done, simply use exFAT EXPORT or AIR EXPORT in iPhoto or Aperture to grab the original versions or export to a higher quality file format like.avi. It's really that simple.
