I think the AI capabilities have a lot to offer. I think it makes sense for it to just "learn", instead of forcing users to develop through trial and error. I wish they were available in other products to leverage their training data. I like the AI capabilities in the smart object tools (not the other auto-enhance tools), they make it easy to use Photoshop, but AI can only help if it can understand it's being told to do something, and intelligent thinks are limited by the amount of training data it has. More data, better decisions. As a result, it can only do so much, and there is always room for improvements in AI, a lot of which are still to come.

Adobe Photoshop Elements users will also see advancements in their workflow that minimizes time away from their work. New "Share for Review" technology, which integrates directly into Photoshop, allows collaborators to view, mark-up and discuss edits of the same photo in real-time. Digital art directors will also appreciate new fill and crop tools that enable them to easily remove unwanted backgrounds or add placeholder text on images in the browser. Adobe Photoshop users will benefit from the latest improvements in Elements 12, including a one-click Save Image tool that allows users to save and edit images directly from the browser. Also available on the desktop app for the first time, this powerful feature enables users to save Live Photos in their Library, share them via email and instantly access them on the desktop version of the editor. Unlike traditional image browsers, this tool utilizes the viewer's programs for editing capabilities, offering a smoother image-editing experience. Photoshop users have been asking for removal of the 3D tools for some time, and the expectations of a new generation of creative professionals -- who have so recently begun adopting the web as their primary and preferred platform for work -- align with the desire to free up more time for creating and editing live images. Also for the first time, Adobe Photoshop Elements users will see new, powerful user interface (UI) elements, including the new Tab Bar and Line Art Editor Preview. Access to Tab Bar, which will be available on the desktop application, will be a simple, single click. This will make it easier to find specific tools, such as Adjustment Layers, Content-Aware Fill and Removal Panel.
